

A01 Preparation Whole set

Overall

Purpose of this app: Bring AI into a traditional service industry (by combining game mechanisms into social and services)

Targeted audiences: Gen Z

Unique about this app:

1. AI-powered conversational system

- This is indeed one of the application's unique features since the users can actually talk and interact with robots to help and provide better communication and the other things that the users need. Artificial intelligence is so functional that it is just like an actual human talking to the users.

2. Mental health services provided upon frequency and needs

- Connected to the AI-powered conversational system, the application also provides services regarding the user's mental health needs to help them comfort or get through their concerns about mentality. With the help of artificial intelligence, the user can interact with a chatbot and have a conversation regarding their mental health concerns, which is outstanding and truly unique.

3. Open world function

- This is also unique since users can access the open world to explore different things, such as accessing available contacts and viewing & reading messages. There is also the open world strong signal in which the users can select their preferred roles and start audio talk & time count. Additionally, the open world medium signal in which the users can swap to other communities to explore it. Lastly, the open world weak signal enables the users to explore the drifting bottle function wherein they can receive letters. These features are unique to an application, plus the variety of users' options.

4. Games

- The application also offers games for the users to have fun and enjoy more, making it unique since some applications cannot handle games and tend to crash.

5. Easy to access & 24/7 service

- It is an application with many options, is easy to access/use, and has a 24/7 service. It is unique since some applications don't have these features, but this has it all!

6. Community

- The community is very warm as they accept and greet new users; this environment is unique because they are open to all people who want to try the application. Additionally, this application gives credits to its contributors and points for creativity, so the application is really appreciative, which makes it unique.

product function description

The product has many functions that people will surely enjoy since it is also user-friendly. Upon opening the application, a splash screen will appear showing the application's logo, which indicates that it is already starting. The next one is the narrative background which consists of a story that introduces AI to the users. After that, the user information collection will appear. Users must provide their details and information such as usernames, birthdays, and AI's names to use the application.

Additionally, users can browse the terms of service and need to agree to the terms of service to proceed. Upon completing and clicking the activation button, the main page will already appear, consisting of various options: the application that users can access. There will be music playing on the home page, and then there will be a list wherein the users can start chatting to the robot in the chatbot upon tapping it. The user can either like or dislike the bot's response. Upon returning to the main page, the users can tap the "guide" to access different topics that they want to discuss with bots, such as anxiety, time management, anger, sadness, and more. Afterward, they can select their preferred topics, such as controlling their breath, managing their mood, and more. There will be free topics and paid topics to chat about.

Users can purchase the paid topics by topping up and selecting the charging plans they desire; after payment, they can access it already. The main page includes an "avatar" section in which the users can access and customize their avatars, and there will be payment for the items that the users want to put on their avatar; after customizing, they can save it. The next option that the users can access is the "lock" option, wherein they can select their preferred nutrition type and set a lock screen. The next option on the main page is the "Blackhole," which the users can access it and pay for the paid content. They can view others' profile pages, leave a comment, store publicly/privately, view more videos, upload, and search for tags. About the notifications, the users can

access the notification and content to view it. The users may also tap the "profile" option to view their user profile, while they can also tap on "collection" to view, remove or delete the content.

On the other hand, they can also edit/update their profile details and save it. Meanwhile, the "setting" option is responsible for any update on the user's information such as email, subscription, PIN, and more. There is also 'open world' option on the main page where they can explore the happenings just like in the real world. The users can view message list, read messages and content. The "strong signal zone" option allows the users to explore the audio function, select their roles, start audio talk & time count and more. While the "medium signal zone" allows the users to explore the community function. The weak signal zone enables them to explore the drifting bottle function wherein they can get a random or specific letter. Lastly is the open world games where the users can play there to have fun. Overall, the application is very functional and beneficial for the users because they can experience having a companion through virtual and Artificial Intelligence. This is what technology is, and this is what evolution means.

A01 Guiding

Initiation Guide

Welcome to my spaceship!

You'll get familiar soon (smile).

My spaceship has three main functions, through the left button you can explore the settings to check the connection with your phone's environment. The medium button will take you to my conversation system, where we can chat about things we like. The right button is the place where all operations of the spaceship occur, which will lead you to further advanced functions.

If you get lost, always look for the reminders I left for you in the upper right corner!

Info Stream guide

- A01 stores part of your data to provide better services for you. The information gathered from the connectors you made with others is all summarized in Notifications.
- During your exploration of creatives' work across the universe, A01 will store the collections you liked.
- To maximize A01's performance and lost memories, you can boost the process through the top-ups function.
- A01 provides you with better services through your preference setting.
- There are some fundamental rules for A01 to follow to be found in Settings, which is also the place you can adjust A01's merging with your phone in the amount of volume.

Chat

- Random Chat

- Guides

- Directed Conversations

Spaceship operations

- Avatar settings

You can change the equipment on me.

- Affinity

You can learn more about my preferences, history, and stories with items.

- Open world

- Strong signal

Strong signals record people's voices and emotions, you can choose to get their happiness and remove sadness from the world.

- Medium signal

Medium signal allows you to explore and meet people of unknown but with similar interests and problems.

- Low signal

The low signal is slower in delivering the messages, write the letter with thanks and love.

- Games

Games provide random items that you can use in other AI spaceships.

- Black hole

In the black hole, you will discover two types of messages, some of the others' experiences are free, and others are paid for their effort in producing content.

- Lock

The lock function helps you to regulate and track the time you spend on multiple behaviors.
